

ONG YI JUN

Data Analyst | Analytics & Data Lead | Big Data Platform Development

Selangor, Malaysia | +60 16-860 9059 | edmundong1125@gmail.com | [LinkedIn](#) | <https://oyi623.github.io/>

PROFESSIONAL SUMMARY

Results-driven Data Analyst with two years at Huawei delivering enterprise analytics platforms, large-scale data migrations, and AI-driven decision tools. Proven at owning projects end to end — from leading the global rollout of an AI ERP forecasting tool to building agentic AI workflows that cut a core development task from 5 days to roughly 2 hours. Combines hands-on technical depth in Python, Java, and Spark SQL with the leadership to guide cross-regional teams and standardise how analytics is built and delivered. Seeking an Analytics / Data Lead role to drive data strategy and grow high-performing technical teams.

CORE SKILLS

Analytics & Data Science: Data analysis & preprocessing, geospatial/GIS analytics, root-cause analysis, statistical analysis, ML model evaluation

Big Data & Engineering: Spark SQL, data migration, batch & real-time pipelines, ETL & plugin-component development, data governance & quality

Languages: Python, Java, SQL, JavaScript, PHP

Frameworks & Libraries: Pandas, GeoPandas, SciPy, Django (REST), Spring Boot, MyBatis, Vue 3

Databases: PostgreSQL, MySQL

AI / LLM: Agentic AI & harness engineering, LLM prompt engineering, AI-assisted code generation

Platforms & Practices: Linux shell scripting, RESTful API design, KNIME-style workflow platforms, Agile cross-functional delivery

Leadership: Global rollout leadership, cross-regional team guidance, developer enablement & standardisation, mentoring

PROFESSIONAL EXPERIENCE

Data Analyst

Mar 2024 – Present

Huawei

- Lead analytics, data-platform, and migration initiatives end to end — from requirements through global deployment — across multiple concurrent enterprise projects.
- Designed and built harness-based AI agents now used daily by the team, including an end-to-end agent that cut plugin-tool development from 5 days to roughly 2 hours.
- Led the global rollout of an AI-driven ERP demand-forecasting tool, guiding cross-regional teams through deployment and maintaining three concurrent platform versions.
- Drive developer enablement by standardising plugin development through a reusable Java template and LLM-based code generation, and deliver decision-grade analytics for CXO-level strategic planning.

Data Analyst Intern

Aug 2023 – Jan 2024

Huawei

- Performed data preprocessing, exploratory analysis, and AI model evaluation using Python (Pandas).
- Built and maintained web applications with Django REST Framework, Java Spring Boot, and Vue.js over MySQL and PostgreSQL databases.

Research Assistant

Feb 2023 – Jun 2023

Xiamen University Malaysia

- Developed web applications (HTML, CSS, PHP) to fetch and process data from MySQL, and built map-API JavaScript modules for geospatial data visualisation.
- Co-authored a published ACM research paper on distributed IoT load balancing using deep reinforcement learning.

KEY PROJECTS

Enterprise Big Data Platform Migration — *Data Integration, Batch & Real-Time Pipelines, Data Modelling, Governance*

- Key contributor to migrating a client's operational data across every business department — including ERP, CRM, and OA systems — onto the company's big data platform.
- Led data requirement gathering, data-model design and restructuring, and the build of batch and real-time pipelines, embedding data governance and quality controls; drove user acceptance testing with client stakeholders.

Agentic AI Workflow Development — *Harness Engineering, LLM Agents, Automation*

- Designed and built harness-engineering-based AI agents now used daily across the team to improve work efficiency.
- Independently developed an end-to-end agent that cut data-platform plugin development from 5 days to roughly 2 hours.

Time-Spatial Digital Twin Dashboard (\$1.4M) — *Python Django, RESTful APIs, JavaScript, GIS*

- Built the backend for a geospatial dashboard used by CXOs for strategic planning — 17 RESTful APIs handling 49 SQL queries across 948 database columns.
- Designed a 5,000-line configuration system for map and chart rendering and collaborated on frontend visualisation modules.

Big Data Platform — Plugin Component Development — *Java, Spark SQL, LLM Prompt Engineering*

- Built reusable plugin components for a KNIME-style platform (data-lake extraction and ML-based transformation via Spark SQL), and designed a Java template that standardised and accelerated plugin creation across the team.

Bad-Area Root-Cause Analysis & Demarcation — *Python Pandas, GeoPandas, SciPy, Linux*

- Automated analysis of 200GB of geospatial data to pinpoint problem areas and root causes (60%+ faster diagnostics), optimising a core spatial algorithm from 78 to 30 minutes.

Data Governance Tool Development — *Python Django, Vue 3, PostgreSQL, Axios*

- Integrated metadata-based governance into a global data platform (19 APIs, 50 SQL scripts) and coordinated six cross-functional developers and testers for delivery.

EDUCATION

B.Eng. (Hons) in Software Engineering

Feb 2020 – Jan 2024

Xiamen University Malaysia · CGPA 3.51 · 100% Tuition Scholarship (4 years)

CERTIFICATIONS & ACHIEVEMENTS

- Member, Mensa Malaysia — recognised among the top 2% IQ globally.
- Huawei Work-Level Data Analyst Certification — “SEC 数赢未来 DA Training Camp” verification test.
- Best Presenter — 6th International Conference on Electronics, Communications and Control Engineering (ICECC 2023).
- Top 10 Finalist — Programming League National 2023, Universiti Malaya.

PUBLICATION

“Distributed Internet of Things Load Balancing using Deep Reinforcement Learning,” *Association for Computing Machinery (ACM)*, Aug 2023. [View publication](#)
